WHAT IS A FOODPAIRING TREE AND HOW CAN I USE IT?

Once the aroma components of a particular food have been analyzed, they are compared to a database of several hundreds other food & beverages products. Products which have aroma components in common with the original ingredient are retained. The results are then graphically presented on a Foodpairing tree. The chosen food is placed at the center of the tree and surrounded by possible combinations. The closer to the center, the better the match. Discover new matching ingredient and create exciting taste combinations at [Foodpairing.com](https://www.foodpairing.com)!
